BRIEF SUMMARY OF SIGHTING

Trajectory of obj was rectilinear. The object was variously described as an orange-colored ball of fire, an arrow, or a cone shaped obj trailing a bright green-blue cloud of smoke.

11. COMMENTS

REPORT STRANGE OBJECT OVER TANGIER AND FES -- Fes, Le Courrier du Maroc,
22 Sep 52

REFER TO SE: 16 JUL 52 - FR. MOROCCO - RABAT

(10) On 21 September 1952, at 1815 hours, many people at a beach 17 kilometers from Tangier saw toward the south a luminous disk of a diameter close to that of the setting sun, flying horizontally from east to west. After holding its course for about 12 seconds, the disk, which looked like a brightly illuminated metal object, suddenly emitted two great streaks of flames and disappeared.

At 1820 hours, a strange object was also seen in the sky over Fes, French Morocco, flying at high speed from east to west and leaving behind a luminous white trail.

BELIEVE OBJECT OVER MOROCCO ONLY A METEOR -- Rabat, L'Echo du Maroc, 22 Sep 52
REFER TO CASC 1/6 Jul 52 - FR MOROCCO - RABAT

On 21 September 1952, at 1818 hours, the mysterious flying object seen in all Morocco and beyond was observed over Rabat. It seems more likely, however, that this time, it was a meteor, because the trajectory of the object was given as rectilinear, it did not maneuver in the way saucers are said to do, and its entire body was incandescent, which is not true of flying machines.

The object was variously described as an orange-colored ball of fire, an arrow, or a cone-shaped object trailing a bright green-blue cloud of smoke, heading from east to west and parallel to the coast, and moving at the speed of a conventional plane at an altitude of about 1,000 meters. The object was visible for only a few seconds. After it passed a thin, white trail of smoke remained visible for about 5 minutes.

PILOT GETS CLOSE VIEW OF SAUCER FOR BRIEF INTERVAL -- Casablanca, Maroc-Presse,
23 Sep 52

REFER TO CASE 16 JUL 52 - FR. MOROCCO - RHBNP

The pilot of a tourist plane reports that on 21 September 1952, he flew
for 10 seconds and about 50 meters in the same direction as the flying saucer
so widely observed that day. This former military pilot, whose name is Creze,
answered specific questions put to him and gave the following information:

As he was preparing to land at an airfield in Casablanca, at 1825 hours,
he noticed the strange object about 30 meters to the left of his plane (a
ground mechanic later verified this, as he saw a luminous object fly between
himself and the plane). It was flying horizontally from east to west, along
the same line of flight as that maintained by Creze. The latter was doing 220
kilometers an hour at the time, at an altitude of 450 meters, and the object
was going about twice as fast. He motioned to his passenger, who saw it too.
It looked like a bright blue-green flame and had an oblong cigar-like shape.
He heard no noise coming from it. After it passed the plane, it disappeared
in the direction of the sea. The pilot did not attempt to pursue it, fearing
the same fate as that of the US pilot [Captain Mantell].

That same evening, in Azemmour, French Morocco, a French couple and their
farm workers heard a loud explosion as the strange flying object passed by.
This is the first report we have of any sound heard from such objects. Other
reports were received from Fez, Meknes, and Safi, where in each case the sight
ing was said to have occurred at 1820 hours.

1. Transmitted herewith is preliminary information obtained from two German

1. Transmitted herewith is preliminary information obtained from two German astronomical observatories as a result of letters written during July 1952 by an officer of the German Space Travel Society, who is preparing a report on "unexplained aerial objects".

2. Part II of this report contains a translation of a letter from the Swabian
Astrochemical Observatory, Stuttgart, which gives explanations of several observations.
A translation of a letter from a private observatory at Constance which also includes
a brief description of a sighting near Casablanca, Morocco is also included in Part II.

3. Additional information from other institutions will be forwarded by later reports.

4. The information contained herein will be of interest to the Air Technical Intelligence Center, Wright-Patterson Air Force Base, Ohio.

THOUSANDS WITNESS SAUCER OVER MOROCCO AND TANGIER -- Casablanca, Maroc-Presse,
22 Sep 52

9. REFER. A CASE. 16 Jul 52-RABAT, FR. MOC.

On 21 September 1952, at about 1820 hours, an unusual object, possibly a saucer, flew at great speed over Casablanca. Shortly afterwards, about 15 telephone calls were received from local residents, and our Tangier correspondent

- 2 -

called to say that he had seen the object going from east to west at 1815 hours (about 2-5 minutes before it flew over Casablanca!). Also, two observers in the Nefifik River valley were able to time the passage of the object with a chronometer; it was then 1817 hours, and the object was coming from the direction of Rabat, traveling from east to west.

Some of the reports gave the following details about the object: luminous, cigar-shaped, and giving off a silvery smoke trail; a luminous, whitish-green globe ending in a long cone and flying about 700 feet up, the same as a plane which flew by at the same time (outside of Casablanca); and a flaming, globe-shaped mass trailing white smoke in puffs, as though puff followed an explosion -- the object stopped short a moment and revolved on itself, emitting a shower of sparks about its cone.

About 6,000 spectators at a boxing match in Casablanca saw the object pass over the arena. In Louis Gentil, numerous persons saw it at 1818 hours, flying from east to west. In Marrakech, it made its appearance for 5 seconds at 1830 hours, when it was clearly seen by three persons who described it as a meteor, again traveling from east to west.

AIR INTELLIGENCE INFORMATION REPORT

FROM (Agency)	REPORT NO.	PAGE	OF	PAGES
Hq., USAFE, ATI Branch	ATI-2203-52	3	3	3

Constance, 24 September 1952
Dr. L/Mo

Dear Sir:

In your letter addressed to the private astronomical observatory of my brother, you raised the question as to whether, within the scope of his observations, he had observed any phenomena like the so-called "flying saucers". I take the liberty to answer your question as follows:

My brother died a few years ago and his astronomical observatory ceased to exist. I myself continued his work on a very small scale and made certain astronomical observations. However, these observations can, on no account, be considered as fully reliable. I have never observed phenomena similar to the above-named ones, however, as mentioned before, my observations are not fully reliable.

It is correct that almost all reports on "flying saucers" come from the USA. However, some days ago, I found the inclosed newspaper article according to which a "flying saucer" has been observed by many people on the coast of Morocco near Casablanca. I do not know whether you read this article and, therefore, I inclose it for your information.

Very truly yours,
/s/ *[Redacted]*

Inclosure: "On Sunday evening, thousands of people observed a "flying saucer" emitting a metallic green light which was rushing at lightning-speed across the skies over Casablanca. It was visible for about six seconds. Eight minutes later, it was observed over Boulhaut which is 50 kilometers away from Casablanca."

LETTERS GIVING OBSERVATIONS OF UNEXPLAINED AERIAL OBJECTS

Letter from Swabian Astronomical Observatory, Reg. Stuttgart
Office: Louschnerstrasse 51 - Postal Checking Account, Stuttgart No. 221 37
(14a) Stuttgart W., 02 September 1952

Dear Sir:

In reply to your inquiry we inform you that heretofore we have not observed any "flying saucers" in this region. However, besides this negative information, we are able to relate some experiences which may shed some light on the origin of such observation reports.

Only last summer, I received an excited telephone call in the middle of the night reporting an unfamiliar object rising on the eastern sky with increasing brightness and a remarkable change in color from red to white at a clearly visible although not very high speed. The observer indicated the position of this object relative to landmarks on the horizon so that it could be traced unmistakably. By an immediate check, I identified the mysterious thing as the rising planet Jupiter. Its brightness is of such intensity that the layman not being able to spot another star of similar brightness, mistakes it for something extraordinary. After its rise above the horizon, it first appears in a light-absorbing haze which makes it appear reddish and of lower brightness than later. As long as it is still near the horizon, its motion relative to the horizon is clearly observable; however, the speed of this motion is overestimated particularly by the layman who believes that the celestial bodies are standing still or moving so slowly that one cannot discern any motion at all.

Another time, a great noise suddenly arose in front of the astronomical observatory - "flying saucer". We immediately looked out and saw a 1/4 degree long luminous body flying along the southern horizon. It could immediately be identified through a former AA telescope: it was a glider in tow, the wings of which bore the words "Trumpf - Pralette" in luminous letters.

The third time, it was an airliner flying at a relatively high altitude whose searchlight, "radiating from behind" through the haze lingering over the town, produced a spot somewhat weakened in color with a dirty red rim. Thus, we were able to clarify all reports given to us in a very sober manner and, based on these experiences, we are inclined to believe in similarly simple explanations for a high percentage of all reports on flying saucers.

Hoping that this information will be of some use to you, we remain,

*
Very truly yours,
/s/ [REDACTED]
SWABIAN ASTRONOMICAL OBSERVATORY, Reg.
